A DAY AT VACHERON CONSTANTIN

TEXT AND PHOTO BY SERGIO ZAGIER WITH THE COLLABORATION OF CLAUDIA HERRERA

Visiting the house of Vacheron Constantin is a luxury that few can boast, an idyllic and timeless experience. We arrived in a limousine and left with powerful images that treasure the knowledge accumulated over centuries at the service of time made in the likeness of dreams.

To an enthusiast of sophisticated watches and the history of Patagonian exploration, the Vacheron Constantin "Famous Explorers" dedicated to Magellan is almost a religious experience. The enameled dial depicting an antiquestyle map of Tierra del Fuego with legends in Spanish does not have hands, but loose digits that fly over a 120 degree arch over an hour. Something innovative, with the aesthetics of half a millennium ago. With that image of the map of the Strait of Magellan, I left for Switzerland, anxious Manufacture.

took us from the German-speaking area to the French-speaking region day, so I still had all afternoon to explore the lake coast where not a few high-end matchmaking boutiques exhibit their collections.

are applied on the engraved surfaces to produce that typical effect of decorated watches.

Many of the calibers that are produced boast a hand-made decorative engraving over bridges and plates. This turns the watches into jewels, particularly due to the tendency in many brands to launch skeletonized models or with a transparent crystal back in place of the metal of the rest of the case. Vacheron Constantin watches are a classic in this sense. It is enough to remember the exposed bridge with the shape of the Geneva Cross, a small masterly piece with sharp points which is extremely difficult to produce.

The Geneva Seal calls for a special mention. It is an extremely demanding award granted when certain technical requirements, which are met. In one of the hallways of the in detail each point the calibers must meet to be approved and stamped Vacheron not only meets but exceeds Speaking of teaching and techni- these requirements and is then allowed to exhibit the tiny shield in

watchmakers not only produced new calibers, but discovered new principles and created new concepts to keep time under control. They also invented escapements, compensated temperature and decorated small works of art.

About all this, we talked with Christian Selmoni, Artistic Director of the firm, with whom we shared lunch in an exquisite private room. Great windows overlooked the semiurban surroundings, very verdant and bucolic. The rest of the walls exhibited antique collection watches. "Our industry suffered an almost terminal epidemic a few decades ago -Christian says- but thanks to the drive and courage of some visionaries, classic watchmaking survived and prospers."

After visiting Vacheron Constantin and knowing its décor, its sobriety and respect for detail on each piece, one understands why collectors are willing to give everything for a watch like the ones created here. ◊
